

# Engineering Practice

Validant has in-depth knowledge of the Medical Device, Pharmaceutical and Biologics sector and an extensive network of senior level professionals with the niche skill sets that are in high demand in the industry. We combine this market knowledge with our proven technical search capabilities to deliver a comprehensive, high quality search solution for our clients.

# Key Focus Areas

Validant has participated in various large scale engineering projects with Fortune 500 clients. We have successfully executed validation remediations of processes, equipment and test methods for major life sciences manufacturers.

## Leadership

Validant engineers have led successful projects in the areas of new facility qualifications, and remediation of existing facilities and utilities to comply with current regulatory standards. In addition to facilities projects, Validant engineers have also led major process equipment validation efforts – both existing processes and capacity expansion projects. We have experts in critical systems, utilities, and sterilization who bring immediate and measurable results.

## Expertise

Validant engineers have led a variety of product development efforts, incorporating all of the required design control practices along with active risk management programs. We have helped our client to bring products from concept to commercialization in a timely and compliant way. Our engineers are experts in the regulatory requirements governing new product development and market launch.

## Partnering

Whether your organization is in need of occasional support from an experienced industry professional or is looking to ramp up for key projects, Validant is ready to deliver the expert talent you need. We invite you to learn more about our solutions and how we can become your trusted resource provider. or is looking to ramp up for key projects, Validant is ready to deliver the expert talent you need. We invite you to learn more about our solutions and how we can become your trusted resource provider.

### Some key areas of focus within the Engineering discipline includes:

- Facility Operations, Construction, Expansion and Closure
- Installation and Commissioning
- Quality Engineering
- Supplier Quality Engineering
- R&D Engineering
- Validation Engineering
- Sustaining Engineering
- Verification and Validation
